

How to Identify Potential Patients On Service

Potential NIV Patients

One way to find potential NIV patients is to look at your current patients on-service.

These tend to be patients on long-term therapy, but they do not have to be.

Potential NIV Patients

Look for patients with any increase in “visits”. This could mean:

- Increased visits to pulmonologist

OR

- Increased hospital admissions

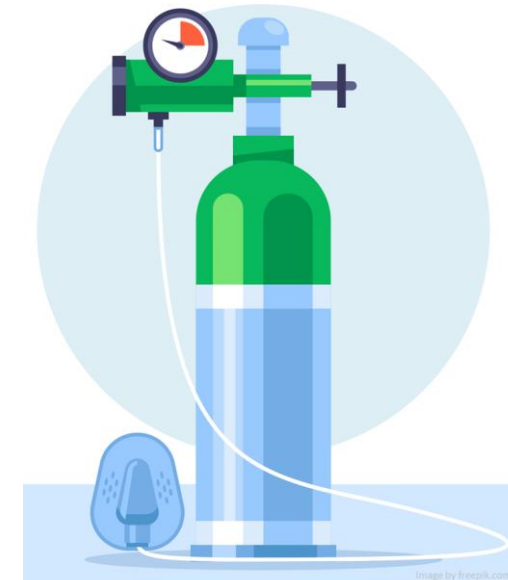

Potential NIV Patients

Look for patients with any increase in “oxygen”. This could mean:

- Increase in oxygen use at home

OR

- Increase in tank delivery

Patient Conditions

Patients with the below conditions may potentially benefit from NIV therapy:

Common diagnoses

- Respiratory patients with recurrent readmissions (COPD, emphysema, chronic bronchitis, bronchiectasis, COVID + chronic disease)
- Neuromuscular disease/disorders of the diaphragm
- Restrictive Thoracic Disease (Kyphoscoliosis, Scoliosis, etc.)
- Obesity Hypoventilation Syndrome
